

Courses taught in foreign languages in academic year 2020/21

Content

Environmental English.....	2
International Environmental Law.....	3
Valuation and Pricing of Natural Resources.....	4
Ecological Economics.....	5
Environmental Drainage Systems	6
Water in Landscape.....	7
Environmental Geology.....	8
Subterranean Habitats	9
Advanced Separation Methods in Environmental Analysis: a practical course.....	10
Advanced Separation Methods in Environmental Analysis: Theoretical part.....	11
Management of Protected Areas.....	12
Transportation and Environment.....	13
Transportation and Environment II – Selected Topics (in German) / Verkehr und Umwelt – ausgewählte Themen (in deutscher Sprache)	14
Environmental Issues of Turkey and Middle East	15
General Economics.....	16
Environmental Microbiology.....	17
Laboratories in Environmental Microbiology.....	18
Geographic Information Systems and 3D modeling	19
Fundamentals of Sustainability	20
Global Environmental Change.....	21
Sustainable Management of Contaminated Sites.....	22
Project Lesson	23
Environmental Humanities.....	24

Faculty/Institute:	Faculty of Environment
Course title:	Environmental English
Course code:	KSPV/OENEN
ECTS:	8
Level of course:	bachelor
Teacher:	Mgr. Miloslav Kolenatý
Term:	Winter, summer
Language of instruction:	English
Lectures/exercises:	0/2 per week
Completion:	written credit test
Course goal:	Introducing basic English environmental terms and skills
Abstract:	<p>Dealing with scientific texts in English (spoken and written). English terminology connected to the studied subject. Language items used in scientific texts. Dealing with topics covering the professional orientation. Improving communicative skills (writing and speaking, above all) focusing on the topics connected to the professional orientation.</p> <ol style="list-style-type: none"> 1. Ecology Basics 2. Earth Science 3. Wildlife 4. Using the land 5. Pollution 6. Waste 7. Energy 8. The Environment of the Czech Republic

Faculty/Institute:	Faculty of Environment
Course title:	International Environmental Law
Course code:	KSPV/OENLE
ECTS:	8
Level of course:	bachelor
Teacher:	JUDr. Žáková Karolína, Ph.D.
Term:	Winter, summer
Language of instruction:	English
Lectures/exercises:	2/0 per week
Completion:	Essay/exam
Course goal:	Introducing one of the youngest branches of international law, focusing on general aspects and specific environmental problems.
Abstract:	<p>The course is intended to introduce students to one of the youngest branches of international law that is becoming more and more important given the global character of most environmental problems. The first part of the course is general in nature dealing with development of international environmental law, its basic principles and main sources, role of various actors and institutions, implementation and enforcement of international environmental rules and international responsibility within this field. The second part focuses on specific environmental problems international law is helping to solve. Protection of individual components of the environment (air, water, soil, forests, biodiversity) is treated as well as fight against particular threats (dangerous wastes, chemicals, radiation, GMOs) and protection of international spaces (Antarctica, high seas and deep sea-bed).</p> <p>The course is terminated with a short essay followed by an oral examination.</p>

Faculty/Institute:	Faculty of Environment
Course title:	Valuation and Pricing of Natural Resources
Course code:	KSPV / OHOPZ
ECTS:	8
Level of course:	bachelor
Teacher:	Doc. Ing. Seják Josef, CSc.
Term:	Winter, summer
Language of instruction:	English
Lectures/exercises:	2/0 per week
Completion:	written test + spoken exam
Course goal:	Introducing the history of natural resource pricing within the economic theory development.
Abstract:	<p>History of natural resource pricing within the economic theory development. Valuation of market and non-market natural resources (ecosystems). Neoclassical methods based on the concept of willingness to pay or willingness to accept. Expert methods based on valuing the ecological functions of ecosystems. Selected case studies.</p> <ol style="list-style-type: none"> 1. Introduction, Importance of natural resource and ecosystem valuations. The practice of environmental expert witnesses. 2. History of natural resource valuations, Time factor, Cost-benefit analysis. 3. Basic estimations of natural resource price. Formulas for basic natural resource types. 4. Land valuations (admin. and market prices, price information system, price maps) 5. Valuation methods of ecosystem functions and services. Preferential and expert methods. 6. Case studies in contingent valuations in environmental quality change. 7. Biotope valuation method (BVM) in the CR. 8. Case studies in BVM. 9. Ecosystem services and their valuations. 10. Externalities and public goods. 11. Property rights and nature protection. 12. Valuations in integrated forest functions. 13. Pricing of water and water flows in landscape. 14. Seminar works and their assessment.

Faculty/Institute:	Faculty of Environment
Course title:	Ecological Economics
Course code:	KSPV / OEKEK
ECTS:	8
Level of course:	bachelor
Teacher:	Doc. Ing. Seják Josef, CSc.
Term:	Winter, summer
Language of instruction:	English
Lectures/exercises:	2/0 per week
Completion:	Exam/written test
Course goal:	This transdisciplinary course introduces students into the general interactions among economics, economy and natural environment, brings students to the interface of natural sciences and social sciences. Gives basic knowledge about the decision-making processes in frame of the environmental dimension with help of economic instruments and environmental values.
Abstract:	<ol style="list-style-type: none"> 1. Earth and Life history; Energy Flows, Thermodynamics and Life 2. A Short History of Economic Thinking and Doing 3. Ecological Economics as an Integration of Economic System into Ecological System of Biosphere 4. Sustainable Development Principles and Philosophy 5. Valuing Natural Resources and Ecosystem Services 6. Market Failure and Internalization of Externalities 7. Human Behaviour and Economics 8. Macroeconomic Concepts: GNP, GDI, ISEW 9. Economic Instruments and Environm. Adjusted Cost Benefit Analyses 10. Green Taxes, Limits and Commands, Tradable Permits 11. Sustainable Scale, Just Distribution, Efficient Allocation 12. Environmental Dimension of Global Economy 13. Short Essay and Its Discussion.

Faculty/Institute:	Faculty of Environment
Course title:	Environmental Drainage Systems
Course code:	KPV/OEDSY
ECTS:	8
Level of course:	Bachelor
Teacher:	Štibinger Jakub, doc., Ing., CSc.
Term:	Winter, summer
Language of instruction:	English
Lectures/exercises:	2/0 per week
Completion:	Exam
Course goal:	To introduce the basic principles of drainage processes and environmental drainage policy, with focusing on land, structures and water regime protection.
Abstract:	Subject “Environmental Drainage Systems” is focused to present to the students the basic principles and applications of drainage policy. Also environmental or sustainable drainage processes will be presented and explained. The students will be explained with modified hydraulics methods with Darcy’s Law and equation of continuity, which are necessary for design, verifications and estimations drainage and environmental drainage systems, especially to determining of the basic design parameters of drainage. Rural Sustainable Drainage System (RSuDS) with Sustainable Urban Drainage System (SUDS) for mitigation of negative impact of climate dynamics (heavy rains, floods, long term droughts) in the landscape (RSuDS) and in urban areas (SUDS) will be introduced. The findings from the soil hydrology area will be fully used. Exemplary case studies from Czech Republic, Netherlands, Egypt and Taiwan will be discussed.

Faculty/Institute:	Faculty of Environment
Course title:	Water in Landscape
Course code:	KPV/OWATE
ECTS:	8
Level of course:	Bachelor (undergraduate), Master (graduate)
Teacher:	Ing. Martin Neruda, Ph.D.
Term:	Winter, summer
Language of instruction:	English
Lectures/exercises:	2/0 per week and terrain work
Completion:	exam
Course goal:	Introducing the basics of environmental hydrology and environmental water management.
Abstract:	Information about water management in the Czech Republic. Hydrology: catchments description, hydrological cycle, hydrological balance, flow measurements, groundwater, runoff prediction, water quality in rivers and lakes. Methods of streams restoration (principles, techniques, fish pass types) and flood management. Good practise examples. Hydrological measurements in stream or river.

Faculty/Institute:	Faculty of Environment
Course title:	Environmental Geology
Course code:	KPV/OENGE
ECTS:	8
Level of course:	bachelor
Teacher:	Blažková Miroslava, doc. RNDr., Ph.D.
Term:	Winter, summer
Language of instruction:	English
Lectures/exercises:	2/0 per week
Completion:	terrain work 8 h (total), seminar work, exam
Course goal:	Relating Earth Science and Environmental science, introducing the basics of Environmental Geology.
Abstract:	<p>This course relates the science of Earth to activities of human beings. It's a survey of relationship between Earth science and environmental science. Environmental science is the study of total human environment on the present Earth. The course includes the following topics:</p> <p>Environmental geology (Geological Environment, Conditions and Preservation, The Anatomy of the Earth, The Dynamic of Earth – (endodynamic and exodynamic),</p> <p>Geological hazards (earthquakes, volcanoes, landslides, erosion, floods, subsidence, geomedical hazards),</p> <p>Geothermal energy (alternative source of energy)</p> <p>Human impacts on the Earth (resource extraction, ground subsidence, engineering and agriculture, solid and liquid waste, groundwater pollution etc.)</p> <p>Earth resources for society (land and soil, subsurface water, construction materials, industrial and metallic materials, coal and petroleum etc. Geological influence on society (control on landscape and human geomorphology)</p>

Faculty/Institute:	Faculty of Environment
Course title:	Subterranean Habitats
Course code:	KPV/OCAEC
ECTS:	6
Level of course:	bachelor
Teacher:	Pokorný Richard, Ing., DIS.
Term:	Winter, summer
Language of instruction:	English
Lectures/exercises:	0/2 per week
Completion:	Two field trips - Seminar work
Course goal:	Introducing the definition and classification of caves and organisms occupied this ecosystem.
Abstract:	Course covering definition and classification of caves and organisms occupying cave habitats. Caves as a unique ecosystem. Providing basic information about other important underground ecosystems (e.g. debris stones, artificial mining galleries). The course includes visits of caves, artificial mining galleries and debris stones and examples of cave investigation methods. The course is focused on the caves in Northern Bohemia.

Faculty/Institute:	Faculty of Environment
Course title:	Advanced Separation Methods in Environmental Analysis: a practical course
Course code:	KTEV/OEPME
ECTS:	10
Level of course:	bachelor
Teacher:	Prof. Ing. Pavel Janoš, CSc., Doc. Dr. Ing. Pavel Kuráň, Ing. Sylvie Kříženecká, Ph.D.
Term:	Winter, summer
Language of instruction:	English
Lectures/exercises:	0/2 per week, limit 10 students – first come, first served
Completion:	Laboratory work - Seminar paper
Course goal:	Managing the practical application of chromatographic techniques (GC, HPLC) for the determination of pollutants in the environment.
Abstract:	Practical training in application of chromatographic techniques (GC, HPLC) for the determination of selected organic pollutants in environmental samples, including methods of preconcentration and sample pretreatment (extraction, etc.). Special requirements: basic knowledge of principles of analytical chemistry and laboratory skill are presupposed.

Faculty/Institute:	Faculty of Environment
Course title:	Advanced Separation Methods in Environmental Analysis: Theoretical part
Course code:	KTEV/OEPMT
ECTS:	8
Level of course:	bachelor
Teacher:	Prof. Ing. Pavel Janoš, CSc., Doc. Dr. Ing. Pavel Kuráň
Term:	Winter, summer
Language of instruction:	English
Lectures/exercises:	2/0 per week , limit 10 students – first come, first served
Completion:	exam
Course goal:	Introducing theoretical principles and instrumentation of separation methods (GC,
Abstract:	Principles and theory of separation methods. Classification of separation methods frequently used in environmental analysis. Chromatographic methods – principles and classification. Liquid chromatography – instrumentation and environmental application. Gas Chromatography – instrumentation and environmental application.

Faculty/Institute:	Faculty of Environment
Course title:	Management of Protected Areas
Course code:	KSPV/ONPO1
ECTS:	8
Level of course:	bachelor
Teacher:	Ing. Jiří Moravec, Ph.D.
Term:	Winter, summer
Language of instruction:	English
Lectures/exercises:	1/1 per week and/or terrain work
Completion:	exam and/or term paper submission
Course goal:	Gaining knowledge of basic issues of protected area management
Abstract:	<p>The aim of the course is to introduce students to the basic issues of management of protected natural areas (such as national parks, nature reserves, etc). System of protected areas is a cornerstone of a healthy landscape in modern societies. Formal declaration of protected areas is not sufficient, since protected areas need to be properly managed and organized, usually by governmental institutions.</p> <p>Protected areas (PA) contribute to water and soil protection. Protected areas preserve biodiversity and ecosystem functions, which has important economic and ecological implications. Ecosystem functions, such as natural water purification, natural water regulation, pollination, carbon recycling, photosynthesis, etc., have a major significance for human economy and society. Comparison of ecosystem services with technological solutions and fixes is a part of the subject.</p> <p>University graduates will need knowledge of management of PA when working as public administration employees, or as public policy makers. Also private sector employees should understand the purpose and limitations of PA. Tourism in protected areas requires educated visitors for its sustainability. Therefore, sound knowledge of significance and operation of protected areas will improve the educational profile of any student.</p> <p>The course offers to round-up the academic curriculum. It takes an integrated approach, applying both social and natural sciences, and explaining the role of technology. The course is offered to foreign students, as well as to Czech students with sufficient knowledge of English. The course is open to students of all study programs and levels of study. There is an English textbook for the course, written by the lecturer, both in printed version and in PDF format.</p>

Faculty/Institute:	Faculty of Environment
Course title:	Transportation and Environment
Course code:	KSPV/OTRE1
ECTS:	8
Level of course:	bachelor
Teacher:	Ing. Jiří Moravec, Ph.D.
Term:	Winter, summer
Language of instruction:	English
Lectures/exercises:	1/1 per week and/or terrain work
Completion:	exam and/or term paper submission
Course goal:	Gaining knowledge of basic environmental issues of transport
Abstract:	<p>The aim of the course is to introduce students to basic environmental issues of transport (air and water pollution, soil sealing, landscape and biodiversity impact). Proper transport planning and management is essential for well-organized cities, regions and countries. Governments, private businesses and individuals have to look for solutions, both organizational and technological, in order to counter negative environmental impacts, including traffic congestion.</p> <p>The students will inquire into measures attempting to eliminate or reduce the negative environmental effects of transport. Topics covered will include land-use planning, reduction of traffic flows, technical anti-noise measures, technological adjustments of road pavements, cars and fuels, and construction of eco-ducts. The issue of transport-disadvantaged groups (handicapped) will be addressed, both organizational and technological measures. Public policies supporting environmentally sustainable modes of transport, and energy issues will be explained and discussed.</p> <p>The course is offered to foreign students, as well as to Czech students with sufficient knowledge of English. The course is open to students of all study programs and levels of study. There is an English textbook for the course, written by the lecturer, both in printed version and in PDF format.</p>

Faculty/Institute:	Faculty of Environment
Course title:	Transportation and Environment II – Selected Topics (in German) / Verkehr und Umwelt – ausgewählte Themen (in deutscher Sprache)
Course code:	KSPV/OTRE2
ECTS:	8
Level of course:	bachelor
Teacher:	Ing. Jiří Moravec, Ph.D.
Term:	Winter, summer
Language of instruction:	German (Deutsch)
Lectures/exercises:	1/1 per week and/or terrain work (1/1 pro Woche und/oder Exkursion)
Completion:	exam and/or term paper submission (Prüfung und/oder schriftlich Semesterarbeit)
Course goal:	Gaining knowledge of basic environmental issues of transport. (Die Umweltwirkungen des Verkehrs und die Maßnahmen zur Reduktion der verkehrlichen Umweltbelastungen kennenlernen.)
Abstract:	<p>The aim of the course is to introduce students to basic environmental issues of transport (air and water pollution, soil sealing, landscape and biodiversity impact). Faculty/Institute:	Faculty of Environment
Course title:	Environmental Issues of Turkey and Middle East
Course code:	KSPV/OETMD
ECTS:	8
Level of course:	bachelor
Teacher:	Ing. Jiří Moravec, Ph.D.
Term:	Winter, summer
Language of instruction:	English
Lectures/exercises:	1/1 per week
Completion:	exam and/or term paper submission
Course goal:	Developing knowledge of environmental issues of Turkey and Middle East
Abstract:	<p>The aim of the course is to analyze selected environmental issues of Turkey and countries of the Middle East. The topics include air pollution, water pollution, water scarcity and management, soil degradation, erosion and desertification, forestry and biodiversity maintenance. The emphasis of the course may change from semester to semester, according to actual environmental events and developments.</p> <p>The students will inquire into measures and policies attempting to reduce selected environmental problems. Various approaches will be inspected (technologies, legislation, economic incentives, education and information). A participation in the course presumes basic general knowledge of environmental issues. Independent study and desk research will be encouraged.</p> <p>Topics covered will include land-use planning, reduction of traffic flows, technical anti-noise measures, technological adjustments of road pavements, cars and fuels, and construction of eco-ducts. The issue of transport-disadvantaged groups (handicapped) will be addressed, both organisational and technological measures. Public policies supporting environmentally sustainable modes of transport, and energy issues will be explained and discussed.</p>

Faculty/Institute:	Faculty of Environment
Course title:	General Economics
Course code:	KSPV/OECNE
ECTS:	8
Level of course:	bachelor
Teacher:	Ing. Jakub Vosátka, Ph.D.
Term:	Winter, summer
Language of instruction:	English
Lectures/exercises:	2 per week
Completion:	exam
Course goal:	Introducing the basics of economic science.
Abstract:	The General economics course is a first-level introduction to the economic science. Students learn to understand causes and impacts of basic economic phenomena on economic reality. The course consists of the two parts. The first part is focused at microeconomics, where students get acquainted with the behaviour of basic market agents, i.e. households and firms. The second part of the course is focused on the macroeconomic issues, considering the economic role of the state from viewpoints of different economic schools when facing such economic phenomena as inflation, unemployment, international trade, and so on.

Faculty/Institute:	Faculty of Environment
Course title:	Environmental Microbiology
Course code:	KTEV/OENMI
ECTS:	8
Level of course:	bachelor
Teacher:	doc. Ing. Josef Trögl, Ph.D.
Term:	Winter, summer
Language of instruction:	English
Lectures/exercises:	2/0 per week
Completion:	written credit test
Course goal:	Introduction to microbiology with focus on the roles of microorganisms in the environment and their application
Abstract:	<p>The first part of the course presents introduction into general microbiology (evolution and taxonomy, cell structure, proliferation, metabolism, genetics, physiology). The second part is focused on microorganisms in the environment, their relation to other organisms (competition, important symbioses), ecological factors affecting their distribution and their main roles in the environmental processes. The third part is focused on environmental applications of microorganisms (waste-water treatment, bioremediation, waste decomposition, biosensing...).</p> <ol style="list-style-type: none"> 1. Introduction to general microbiology, evolution and taxonomy 2. Cytology and morphology of microorganisms 3. Proliferation of microorganism, growth curve 4. Introduction to microbial metabolism 5. Introduction to microbial genetics 6. Introduction to microbial physiology 7. Environmental microbiology 1 – ecology, strategies, roles, competition 8. Environmental microbiology 2 – microorganisms in soil and air 9. Environmental microbiology 3 – microorganisms in water 10. Environmental biotechnology 1 – biodegradation and bioremediation of pollutants, biosensing 11. Environmental biotechnology 2 – waste-water treatment, waste decomposition 12. Environmental biotechnology 3 – alternatives to chemical technologies (biofuels, bioplastics) 13. Research and development in the field, future perspectives

Faculty/Institute:	Faculty of Environment
Course title:	Laboratories in Environmental Microbiology
Course code:	KTEV/OLENM
ECTS:	8
Level of course:	bachelor
Teacher:	doc. Ing. Josef Trögl, Ph.D., Mgr. Diana Holcová, Ph.D.
Term:	Winter, summer
Language of instruction:	English
Lectures/exercises:	3 blocks of 4 hours
Completion:	written credit test
Course goal:	Introduction to laboratory techniques in environmental microbiology
Abstract:	<p>The course introduces into basic laboratory techniques in general and environmental microbiology. No previous laboratory experience is required. Students shall bring their own sample of natural water (1 L) and soil (~50 g).</p> <p>Block 1 – Introduction to safety in laboratory, introduction to sterile work, preparation of used media, and sterilization of used material.</p> <p>Block 2 – Basic cultivation techniques, culture determination of bacteria in water sample, effect of UV on bacteria, bacterial growth-inhibition assay.</p> <p>Block 3 – Introduction to microscopy, Gram staining of bacteria, microscopy of water microorganisms, determination of phosphatase activity in soil, evaluation of data</p>

Faculty/Institute:	Faculty of Environment
Course title:	Geographic Information Systems and 3D modeling
Course code:	KIG/OGIMD
ECTS:	8
Level of course:	Bachelor/master
Teacher:	Ing. Jan Pacina, Ph.D.
Term:	Winter, summer
Language of instruction:	English
Lectures/exercises:	0/2 per week
Completion:	practical exam / written credit test
Course goal:	Introducing GIS and image-based 3D modeling
Abstract:	<p>GIS has a leading role in analyzing the environment based on spatial data, maps and aerial images. This course will introduce basics of GIS (data collection, visualization and analysis), web-mapping applications, aerial image processing and 3D models creation.</p> <ol style="list-style-type: none"> 1. Basics of GIS – data visualization 2. Map compositions 3. Data going online – web mapping applications 4. How to collect data with your smart-phone? 5. Data collection using precise GPS 6. Image based 3D modeling – create your house, car or head in 3D 7. Aerial image processing (images from aircrafts and drones) 8. Let's fly it up – data collection with UAVs (drones)

Faculty/Institute	Faculty of the Environment
Course title:	Fundamentals of Sustainability
Course code:	KTEV/OFUST
ECTS:	8
Level of course:	bachelor / master
Teacher:	Professor Valentina Pidlisnyuk, Dr.Sc.
Term:	Winter / summer
Language of instruction:	English
Lectures/exercises:	2/0 per week
Completion:	7 lectures and one skype lecture from K-State,USA ; Home reading, conflict resolution exercise, final presentation and test
Course goal:	The course focuses on environmental issues in a globalize contest within the framework of sustainability. Through an interdisciplinary perspective, the course will provide students with key competences and instruments for the analysis of natural and environmental resources in a sustainable perspective and development of policies oriented towards the promotion and implementing sustainability at the local, national and international levels.
Abstract:	The course covers the following themes: sustainable development concept, global events, 2030 sustainable development goals. The ecological, economic and social threats such as water, air and soil contamination, biodiversity loss, ozone layer depletion, waste accumulation, poverty and population growth are deeply overviewed. The course studies policies in climate change, energy implications with the focus at alternative energy - biomass. Through ecological, economic, social and institutional indicators it is shown how to address sustainability at the regional and local levels. The practical aspects of sustainable water use, sustainable agriculture, and greening of economy, education for sustainable development, and approaches for selection and monitoring of sustainability indicators are discussed. The case studies from Central and Eastern European countries and USA are considered as examples of interconnection between economic development, environmental and social aspects, and institutional transformation. Students are supposed to select environmentally coloured problem raised the conflict locally or globally, to discussed it from the prospective of different stakeholders involved and to find an appropriated solution. Lecture from K-State,USA is on Sustainability of Waste Management and provided by faculty member of that university Dr. Larry Erickson.

Faculty/Institute	Faculty of the Environment
Course title:	Global Environmental Change
Course code:	KTEV/OGECH
ECTS:	8
Level of course:	bachelor / master
Teacher:	Professor Valentina Pidlisnyuk, Dr.Sc.
Term:	Winter / summer
Language of instruction:	English
Lectures/exercises:	2/0 per week
Completion:	6 Lectures and one skype-lecture, home-reading, essay, final presentation, test
Course goal:	Course is highly interdisciplinary, seamlessly crossing disciplinary boundaries and offer a “front-loaded” approach. It is introducing students to the science of the Earth and its living and non-living systems as well as how humans interact with Earth and its natural systems and how humans can use powerful tools, such as policy and communication to harm or help those systems. It provides a broad understanding of complex issues involved in global change and global sustainability and enables students to use quantitative tools in approaching global change issues. The main expectations are to advance awareness of the magnitude and consequences of global changes and to train the next generation of problem-solvers who will adequately address the phenomena.
Abstract:	<p>Course consists of two main parts:</p> <p>Part 1. Issues and Driving Forces Growth and nature of environmental awareness, values and perceptions. Critical issues in current and future environmental change in terrestrial, atmospheric, aquatic and marine systems. Climate change and its impact. The forces driving change including population growth and consumption, resource scarcity, climate, patterns of energy use, ecosystem changes, thresholds and sustainability.</p> <p>Part 2: Managing the Global Environmental Changes The nature of environmental changes at various levels, the business perspective, special interest groups, national and international action and co-operation. The formal legal framework. How the above are mediated by crosscutting dimensions of a legal, economic, cultural and ecological nature.</p> <p>Case-studies on mitigation and adaptation measures in CC are presented.</p> <p>Students have to be prepared for a stimulating and challenging journey filled with new concepts, theories, problems, and experiences.</p> <p>Skype-lecture is provided by K-State, USA faculty member Dr. Blasé Level, Centre for Hazardous Substances Research, Environmental Engineering and is about service to communities in environmental matters and adaptation/mitigations measures.</p>

Faculty/Institute	Faculty of the Environment
Course title:	Sustainable Management of Contaminated Sites
Course code:	KTEV/OSMCS
ECTS:	8
Level of course:	bachelor / master
Teacher:	Professor Valentina Pidlisnyuk, Dr.Sc.& Associate Professor Josef Trögl
Term:	Winter / summer
Language of instruction:	English
Lectures/exercises:	2/0 per week
Completion:	3 lectures and 1 skype-lecture, internet search, informal discussions, participation at the Design project presentations at K-State, USA, final presentation and test
Course goal:	Course introduces an integrative project-oriented capstone “bringing” opportunity and is based on international experiences in sustainable management of diverse contaminated land: military, mining and abandoned. Graduates of the course will be well poised to successfully lead in developing and implementation multifaceted solutions to environmental, societal and other cross-sectors problems connected with sustainable approaches in land management.
Abstract:	<p>Sustainable management takes the concepts from sustainability and synthesizes them with the concepts of management having 3 branches: the environment, the needs of present and future generations, and the economy. Sustainable management of contaminated land implies application of sustainable practices to the contaminated lands by operation them in a way that well build current and future generation needs.</p> <p>Course consists of lectures on targeted topics and case-studies from around the Europe and USA. Lectures cover the following topics: “Principles of environmental sustainability”, “Biotechnology for contaminated land treatment”; “Phytoremediation of nonorganic pollutants”.</p> <p>Practical exercises imply: a) observation of internet resources related to the topics b) group informal discussion.</p> <p>Additional course includes introduction of scientific & outreach projects in the region of Central and Eastern Europe and USA: NATO project “New phytotechnology with biomass production for military contaminated sites”, REMKO project “ Remediation of comprehensively polluted soils”, Interreg project “Remediation of military past pollution in Baltic region, EPA USA Superfund site project in Arizona, USA.</p> <p>1 skype lecture on management of USA tribes’ contaminated lands is delivered by professor Octaviana Trujillo, University of Arizona, USA.</p> <p>Students actively participate in the final presentations of Design projects of Chemical Engineering students at K-State, USA being connected by skype. The K-State Design class is led by Dr.Erickson and prof. Schlup, faculty members at K-State, USA.</p>

Faculty/Institute	Faculty of the Environment
Course title:	Project Lesson
Course code:	KPV/OPROJ
ECTS:	6
Level of course:	bachelor / master
Teacher:	Ing. Martin Neruda, Ph.D.
Term:	Winter / summer
Language of instruction:	English
Lectures/exercises:	2/0 per week
Completion:	students' presentation and report
Course goal:	Cooperation between international students and local academics within students' bachelor or diploma thesis, projects.
Abstract:	Students work on their project or bachelor/master thesis and have regular meetings with supervisor. Supervisor is an expert in the field of a project. Students will write a report about a project, which can be part of bachelor/master thesis and have a detailed presentation.

Faculty/Institute	Faculty of the Environment
Course title:	Environmental Humanities
Course code:	KSPV/ OENHU
ECTS:	8
Level of course:	bachelor
Teacher:	Mgr. at Mgr. Kateřina Marková, Ph.D.
Term:	Winter, summer
Language of instruction:	English
Lectures/exercises:	0/2 per week
Completion:	essay/oral exam
Course goal:	Introducing basic English environmental humanities terms and skills, focusing on general aspects and specific environmental problems.
Abstract:	<p>The course is terminated with a short essay followed by an oral examination. Dealing with scientific texts in English (spoken and written). English terminology connected to the studied subject. Language items used in scientific texts. Dealing with topics covering the professional orientation. Improving communicative skills (writing and speaking, above all) focusing on the topics connected to the professional orientation in environmental humanities.</p> <ol style="list-style-type: none"> 1. Welcome to the Czech Republic 2. Environment and Ecology - Sustainable development 3. Earth Sciences and Humanities (sciences) – (philosophy, psychology, cultural anthropology...). 4. Wildlife (Natura) X Culture 5. Using the land – culture (using the land) 6. Philosophy of environmental education
