

QUESTIONNAIRE SURVEY AT UJEP, FEBRUARY 2024

Description of respondents

The sample size calculation was performed using a sample size calculator with a confidence level of 95% and a margin of error of 10% (population proportion of 50%) with a base sample size of N = 1,000 (Raosoft Inc., 2004). The observed sample size is N = 88. This means that a minimum of 88 or more measurements/surveys are required to have a 95% confidence level that the true value is within $\pm 10\%$ of the measured/surveyed value. A total of N = 191 respondents participated in the questionnaire survey conducted during the month of February 2024 (Male = 105 / 55%; Female = 80 = 41.9%, N/A = 6 / 3.1%). These numbers meet the stated condition. Respondents across all faculties were involved in the given survey as shown in the table below:

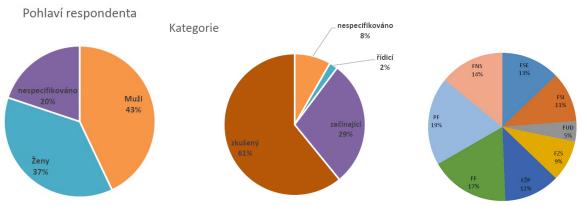

Faculties involved	FF	FSE	FSI	FUD	FZS	FŽP	PF	PřF
Frequency of respondents	17	34	11	6	24	23	35	41

Table 1: Number of respondents involved in the survey with division by faculty.

The same differentiation was also made in terms of classification according to the European Commission and the Internal Wage Regulation of UJEP.

Level of Research experience	Frequency	Percentage
R1- lecturer (A1), assistant (A2), assistant professor, doctoral student (A3)	54	28,27%

Evaluation of the obtained data:

Analysis of responses from respondents across different levels of experience in science and research (R&D) revealed key trends and insights about perceptions of the work environment, satisfaction, and research conditions at the University. Overall, respondents report high levels of satisfaction with opportunities for freedom of thought and choice of research methods, indicating a strong academic culture that supports innovation and critical thinking. Another significant finding is the positive perception of ethical standards and support from the University in matters of personal and professional development. However, some responses point to areas where improvements could be made - for example in feedback and communication on research projects and in the evaluation of research work. Of particular note are the differences in responses between the different experience groups. For example, early career researchers express a need for more intensive support and mentoring, while more experienced researchers focus more on issues related to funding and infrastructure for research. This analysis provides valuable insight into the state and needs of the academic environment and can serve as a basis for further discussion and decision-making processes leading to improved working and research conditions at the university. Compared to the 2018 measurement, the overall picture is perceived more positively or comparably on some issues. Some comparisons are still discussed with the addition of measures that UJEP is currently addressing.

The answers to the open questions were prepared separately for discussion at the UJEP management meeting.
